

**In the Claims**

Kindly amend claims 1, 3, and 4, as indicated in the following marked-up listing of the entire claims now pending.

1. (currently amended) A warp knit consisting of a front surface ~~layer~~ ply and a rear surface ~~layer~~ ply, the front surface ~~layer~~ ply consisting of ultra fine yarn with monofilament denier of 0.01 to about 0.9 denier, the rear surface ~~layer~~ ply consisting of synthetic yarn with monofilament denier of 1 to about 5 denier, wherein the recovery rate of elongation in the directions of wale and course is 8 to about 30 %, wherein the ultra fine yarn is raised.
2. (previously presented) The warp knit as claimed in claim 1, wherein the ultra fine yarn is polyester or polyamide.
3. (currently amended) The warp knit as claimed in claim 1, wherein content of the ultra fine yarn constituting the front surface ~~layer~~ ply is 40 to about 85 % in weight of the total weight of the processed warp knit.
4. (currently amended) The warp knit as claimed in claim 1, wherein content of the synthetic yarn constituting the rear surface ~~layer~~ ply is 15 to about 60 % in weight of the total weight of the processed warp knit.
5. (previously presented) The warp knit as claimed in claim 1, wherein the synthetic yarn is co-polyester yarn with 15 to about 50% of shrinkage rate in boiling water.
6. (previously presented) The warp knit as claimed in claim 1, wherein the synthetic yarn is polyester or polyamide.

7. (withdrawn) A process of preparing a warp knit having excellent touch, characterized in that firstly, knitting a warp knit by using a composite fiber consisting of a fiber formation component of 0.01 to about 0.9 denier and a extraction component as a yarn of a front surface layer, and a synthetic yarn or high shrinkage yarn with mono-filament of 1 to about 5 denier as a yarn of a rear surface layer, and then raising the warp knit until the shrinkage rate of the warp knit is reached 40% or more, and then preliminarily heating, extracting the extraction component from the composite fiber, dyeing, buffing, and finally heating the warp knit continuously.
8. (withdrawn) The process of preparing a warp knit having excellent touch as claimed in claim 7, wherein ratio in weight of the yarn of the front surface layer : the yarn of the rear surface layer is 40 to about 85 % in weight : 15 to about 60 % in weight.
